Art Unit: 1761

1. Claims 2-7 and 19-38 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 19, 20, 21, 29, and 33, the use of the phrases "such as epidermis, ....bundles" and "such as...cytosol" are indefinite as to the scope of the claims. More specifically, it is not clear whether the narrower expression is, in fact, a claim limitation.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 2-6, 19, 20, 21, 26-29, and 33-40 are rejected under 35 U.S.C. 102(b) as being anticipated by Stout, Taylor et al, and Thomas et al.

Stout discloses the preparation of a fibrous product and juice from processing rhubarb. Taylor et al discloses the preparation of a fibrous product and juice from processing banana stalk. Thomas et al discloses preparing a fibrous portion and juice from carrot. Moreover, each of said references produce products which inherently have the attributes needed to be used in preparing a growth media (nutrients and water from juice), use as a soil improver (nutrients and water from juice), and for producing energy (via burning, as in the paper, or consuming as in the carrot juice, for example).

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 1761

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 2-7, 19, 20, 21-29, and 33-40 are rejected under 35 U.S.C. 102(e) as being anticipated by Hondroulis et al.

Hondroulis et al discloses the preparation of a fibrous product and juice from processing banana stalk and grasses, wherein said fibrous product is used to make a variety of paper products including those for sorbent use (e.g. Figure 1). Moreover, Hondroulis et al produces products which inherently have the attributes needed to be used in preparing a growth media (nutrients and water from juice), use as a soil improver (nutrients and water from juice), and for producing energy (via burning, as in the paper

3. Claims 22-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Taylor et al.

Taylor et al further discloses the preparation of the paper products as claimed (see page 2).

4. Claim 41 is rejected under 35 U.S.C. 102(b) as being anticipated by Thomas et al.

Thomas et al further discloses the use of a blender in preparing the carrot juice (e.g. col. 4, lines 60-67).

Art Unit: 1761

5. Claims 30-32 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims. It should be noted that the prior art of record does not disclose or teach the treatment of vegetation from the grass family nor is it disclosed or taught to facilitate preparing a juice with the quantity of protein called for.
